

Health and Safety

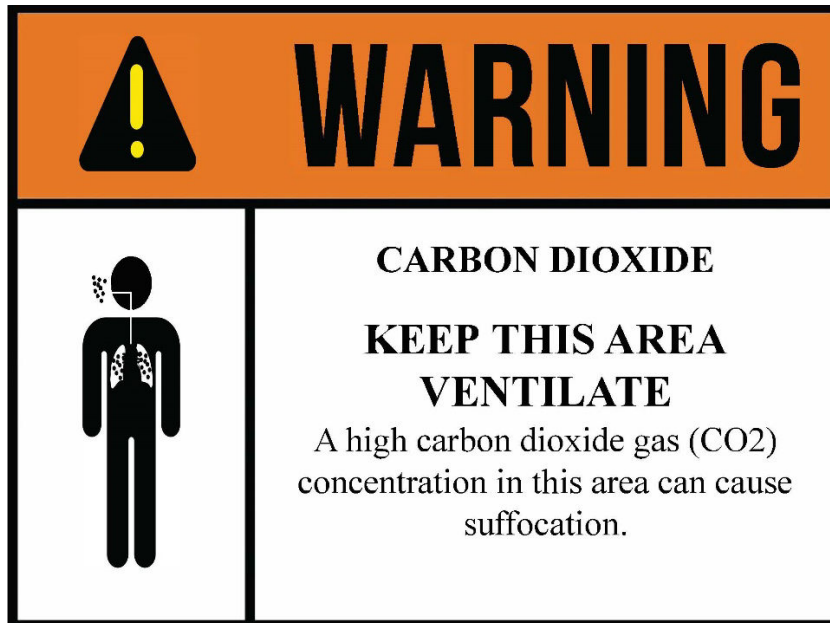

Carbon Monoxide is a by-product of burning fossil fuels, including BBQ's, Pizza Ovens and Fire Pits running on Gas, Charcoal or Wood. These must only be used in a well-ventilated space.

The pergolas we provide are designed to be adaptable by converting the space from closed to open depending on the seasons and use of the space.

When burning fuels, the roof and sides of your pergola must be opened to increase ventilation.

NOTE:

Insufficient ventilation of smoke and CO2 will gather within enclosed spaces will harm you and your guests.
